- Coimbatore , Tamilnadu

PROFILE SUMMARY

Pre-final year B.Tech. student specializing in Artificial Intelligence and Data Science at KATHIR COLLEGE OF ENGINEERING. Actively seeking a summer internship opportunity in software development to apply my knowledge in Python, data structures, and data science, while gaining practical experience on real-world projects.

EDUCATION

SSLC & HSC

- Venkatalakshmi matric higher secondary school

KATHIR COLLEGE OF ENGINEERING

- B.Tech Artificial Intelligence and Data Science
- GPA: 7.04 / 10

SKILLS

- Communication Skill
- Problem Solving
- Teamwork
- Time Management
- Leadership
- Programming Languages: Python, C/C++ (Basics)

LANGUAGES

- Tamil
- English

PERSONAL DETAILS

Date of birth – 26/09/2006

Gender - Male

PROJECTS

INSTAGRAM SPAM DETECTION

JAN 2025 – FEB 2025

- Developed a machine-learning model to detect spam comments on Instagram using text-processing techniques.
- Utilized pandas for dataset handling and cleaning, including preprocessing, tokenization, and removal of noise.
- Applied algorithms such as Logistic Regression / Naive Bayes to classify comments as spam or genuine.
- Visualized model performance using matplotlib to analyze accuracy, confusion matrix, and key metrics.
- Generated insights on frequent spam patterns to improve detection efficiency.

LOAN ELIGIBILITY PREDICTION

Mar 2025 – Apr 2025

- Trained a machine-learning model on applicant financial and demographic data to predict loan eligibility.
- Applied data preprocessing techniques, feature engineering, and model tuning using TensorFlow/Scikit-learn for improved accuracy.
- Output generated eligibility status along with confidence scores based on key factors like income, credit history, and loan amount.

FOOD FRESHNESS DETECTION

May 2025 – Jun 2025

- Collected and preprocessed food quality datasets, including visual and environmental features, for accurate model training.
- Developed and trained a machine learning model to predict freshness levels using key indicators like color, texture, and storage conditions.
- Aimed at enhancing food safety, reducing wastage, and supporting smart monitoring systems.
